

ASI-ware Placement Management System

ASI-ware Placement Management System is a web-based software application used to track and process data for agencies that provide foster care services, residential services and/or home-based services to clients. The system is easy to use and utilizes standard internet browser technology for its user interface. The backend of the system utilizes MSSQL for data creation, updating and deleting.

ASI-ware Placement Management System can track information on clients, staff, foster parents, families and various other program related information. System controlled requirements can help ensure on time delivery of services to clients and fulfilling requirements on staff and families.

Additional Field Technology on ASI-ware

Additional fields were developed to allow organizations more flexibility to track data elements that are important to their organization but do not come standard on ASI-ware. Every additional field configured on ASI-ware will have a start date along with an end date. The use of start dates, and end dates allows organization’s data elements to quickly change as their data needs change. Restrictions can be configured on additional fields which would control what users are allowed to see and/or edit the information.

Areas of ASI-ware where Additional Fields can be used:

System Dashboards and Login Pages provided by the ASI-ware System.

Branch Manager Login Page	The branch manager login page provides an indicator dashboard that displays program information for your organization in a table and chart format. Examples of the information is placements, discharges, average invoice rates, average home payment rates, number of staff, number of incidents, number of referrals and various other statistical data. There are also quick links to important system functions on this page.
Supervisor's Login Page	The supervisor login page includes a dashboard of overdue/coming due soon/awaiting review, case management items. It also provides quick links to the most commonly used reports and tools used in their daily routines. This page also provides a link that allows a supervisor to see ASI-ware as a case manager sees it.
Case Manager Login Page	The case manager login page includes a dashboard of overdue/coming due soon/awaiting review, case management items. It also provides quick links to the most commonly used reports and tools used in their daily routines.
Licensing Login Page	The licensing home page provides links to the user that allows them to quickly find pre-licensing requirements and on-going requirements for parents and homes. This page also provides links for reporting on parents and homes.
Intake Login Page	The intake home page contains links to the functions intake staff need to have at their fingertips. The links are for referral searches, open referrals, pending placements, pending movements, pending discharges, pending respites, current respites, home investigations, case worker statuses, available beds and reports.
Accounting Home Page	The accounting home page contains links commonly used by accounting staff. They include report tools, special payment edit tools, pending placements, pending movements, pending respites, pending discharges, reconcile tools, search tools, authorizations, invoice tools, home payment tools and respite reports.
Residential Census Login Page	The residential census home page provides the user a view of all clients placed in the facility along with the following information client name, bed/room number, on/off campus status, payer, program, level of care, school location, alerts, open incidents, room check schedule and upcoming appointments. The page also provides quick links to the client page, check in/out functions, alerts and appointments.
Authorization Home Page	The authorization home page can be accessed in various places within the application. This page provides the tools to manage service authorizations across all clients easily.

Benefits of the ASI-ware Placement Management System

- The ASI-ware System is a user-friendly system that greatly reduces duplicate data entry.
- ASI-ware is an affordable web-based system which reduces the cost of IT for agencies.
- ASI-ware gives caseworkers more time to serve children and families, thanks to the intuitive design that simplifies service documentation, data management and reporting.
- The system is configurable to state-specific foster care regulations.
- ASIware provides exceptional customer service and support.

What makes ASI-ware unique:

- ASI-ware provides a single software solution to organizations with an array of services under one roof!
- ASI-ware supports specific customizations and data from multiple sources.
- ASI-ware is extremely flexible and allows organizations to make changes to their user interface directly within the application.
