

ASI-ware Solutions

Product Overview

ASI-ware is a web-based software application used to track and process data for agencies that provide community-based services and home-based services to clients. **ASI-ware** can track information on clients, staff, families, organizations and various other program related information. **ASI-ware** has a work flow engine and event triggers that can help your organization ensure it's on time delivery of services. The system includes a web service for integration with other programs.

Custom Data Models on ASI-ware - The custom data model format in ASI-ware allows us to respond dynamically to various data formats and models. This technology provides us with the ability to incorporate customer specific note formats, billing entries and more into their ASI-ware system, therefore providing a, truly, customizable, flexible software platform to make their business more efficient.

ASI-ware tracks but is not limited to the following information:

People	Cases	Services	Organizations
Demographic Data	People Involved	Case Worker	Characterizations
Contacts	Case Status	Referrals	Role

Assessments	Flags	Invoicing	
Flags	History	Documents	
Pictures	Case Priority	Restrictions	
Characterizations	Case Type	Status	
Incidents	Case Category	Unit Plans	
	Case Discharge Reason		

Why Choose ASI-ware

- ASI-ware provides a single software solution to organizations with an array of services under one roof!
- ASI-ware supports specific customizations and data from multiple sources.
- ASI-ware is extremely flexible and allows organizations to make changes to their user interface directly within the application.

Other Features provided by ASI-ware Solutions

Impersonate	System administrators and supervisors can be given the impersonate feature which allows them to impersonate another user on ASI-ware. This feature allows a user to see the system exactly as the other user sees it.
Multiple System Access	ASI-ware allows larger organizations who want separate systems for different programs a single user login and password for all of the systems and easy switching between systems.
Event Triggers	This feature allows organizations to have the system trigger an event to happen based on a function being performed on the system. For example, when staff enters an incident the system can notify another staff of the incident and/or request that staff to complete a function on the system.
Work Flow Engine	The work flow engine can perform functions based off of a predefined schedule, user request or based off of event trigger. An example of a predefined schedule would be, emailing financial reports every morning to senior management staff. Heavy processing functions are passed to the work flow engine to relieve processing delays on the user application.
Web Service	ASI-ware's web service allows for the interfacing to other programs and technologies.
Tasks	User can enter their own tasks or system event triggers can automatically create tasks for cases, clients and/or users.
Reporting and Exporting	The ASI-ware system has a robust reporting engine that can create word documents, spreadsheets and html content. The reporting engine can provide case specific reports, productivity reports, outcome reports, invoicing reports and various other types of reports.

Benefits of the ASI-ware Solutions

- ASI-ware is a user-friendly system that greatly reduces duplicate data entry. The data entered into ASI-ware is reused where needed, eliminating staff from having to retype the same piece of information.
- The system replaces hard to manage and labor-intensive spreadsheets that are commonly found in organizations.
- ASI-ware is an affordable web-based system which reduces the cost of IT for agencies.
- ASI-ware gives caseworkers more time to serve children and families, thanks to intuitive design that simplifies service documentation, data management and reporting. The system allows administrators to focus more on quality and growth than the day to day details of their program.
- The system is configurable to state-specific regulations.
- ASIware provides exceptional customer service and support.
