ASI-ware SmartStart
Product Overview

ASI-ware is a web-based software application used to track and process data for agencies that provide community-based services to clients. The system is easy to use and utilizes standard internet browser technology for its user interface. The backend of the system utilizes MSSQL for data creation, updating and deleting.

Our partners use ASI-ware software to simplify data management, service documentation, and reporting so they can focus on improving the lives of their clients.

ASI-ware *SmartStart* is the out-of-the-box version of ASI-ware solutions. It offers an affordable and efficient approach to implement ASI-ware solutions with a minimal upfront cost.

ASI-ware SmartStart lets you track information on clients, staff, families, organizations and various other programs related information. It easily tracks client demographics, case notes, assessments, progress notes, incidents, treatments and service plans, accounts, invoicing & other data requirements.

Characterizations	Case Type		
Incidents	Case Category		
	Case Discharge Reason		

Other Features

Impersonate	System administrators and supervisors can be given the impersonate feature which allows them to impersonate another user on ASI-ware-SmartStart. This feature allows a user to see the system exactly as the other user sees it.
Multiple System Access	ASI-ware-SmartStart allows larger organizations who want separate systems for different programs a single user login and password for all of the systems and easy switching between systems.
Tasks	The user can enter their own tasks or system event triggers can automatically create tasks for cases, clients and/or users.
Reporting and Exporting	The ASI-ware-SmartStart system has a robust reporting engine that can create word documents, spreadsheets, and HTML content. The reporting engine can provide case-specific reports, productivity reports, outcome reports, invoicing reports and various other types of reports.

Why Choose ASI-ware SmartStart

Cost - ASI-ware SmartStart is designed to allow your agency a low-cost entry point to software implementation on a system that can evolve with your growth.

Startup Time - Many agencies lack the resources or knowledge to effectively implement a customized software solution. ASI-ware SmartStart is an out of box offering that removes these barriers. The functions and features offered are proven in their design and deliverability which translates to the simplified startup process.

Full Implementation Time – ASI-ware SmartStart covers the essentials and provides a path to expedite full implementation across your agency in a timely manner.

Change – As agencies grow, their data management needs change. By using ASI-ware SmartStart, ASI-ware will already understand your agency and your agency's needs. The natural migration path between ASI-ware Smart Start and ASI-ware will allow your agency to grow into ASI-ware with less effort, cost and data loss than starting over with a new system. Implementation of the new functionality will be also simplified because your staff will already be familiar with the system.
